

CORMIX
One step ahead

ABOUT CORMIX

A leader in the construction chemicals industry.

Cormix International is an independent British Company established in 1996 by Edward H. Batchelor who has more than 36 years experience in the Construction Chemicals Industry.

Cormix range of construction products include concrete repair, grouts and anchoring systems, underground construction specialities, waterproofing & jointing systems, elastomeric concrete, admixtures for concrete and shotcrete and industrial flooring systems.

The wide innovative product range available from Cormix allows it to differentiate itself from many of its competitors, this coupled with its dedication to the pursuit of excellence, R&D and excellent quality positions Cormix well in the field of Construction Chemicals. Cormix has the in depth knowledge only a manufacturer can have.

Cormix products are made available worldwide through a network of distributors.

MISSION/VISION

Providing high quality solutions, flexible and responsive.

As a result of its independence Cormix is highly flexible & responds rapidly to the changing demands of the construction industry.

A leader in construction chemicals Cormix provides high quality solutions supported by sound technical service.

The success of Cormix products is demonstrated by the large number of prestigious projects in which they have been used. These cover public and private sector projects including airports, railway systems, subways, dams, power plants, potable and waste water plants, tunnels, ports, highways, industrial structures and numerous buildings.

PRODUCTS / SERVICE

Complete systems with
sound solutions

Cormix systems are backed by
a technical team that can provide
sound solutions to the most
demanding & diverse problems.

The systems available from Cormix
encompass the following:

- Waterproofing
- Concrete Repair and Crack Injection
- Grouting and Anchoring
- Concrete and Shotcrete Admixtures
- Industrial Flooring
- Tunneling Specialities - Injection Resin
& Soil Stabilization
- Elastomeric Concrete Jointing
- Concrete Accessories

WATERPROOFING SYSTEMS

The most technologically advanced waterproofing systems

Cormix maintains the most technologically advanced waterproofing systems giving cost effective solutions via value engineering to both new construction and maintenance projects.

The materials available from Cormix meet all the potential waterproofing needs of today's modern contractors and include :

- Waterproofing by Crystallization-Coatings & Admixtures.
- Acrylic Protective Coatings and Membranes.
- Chemical Waterproofing-Siloxanes.
- Polymer Modified Flexible Cementitious Slurries.
- Polyurethane Coatings.
- Waterstops both swelling & PVC.

The waterproofing products produced by Cormix are constantly updated for various structures such as Bridges, Tunnels, Basements, Roofs, Water Tanks, Waste Water Treatment Plants, Reservoirs and Marine Structures.

Cormix's professional team is available to provide the right waterproofing solutions.

CONCRETE REPAIR SYSTEMS

A Complete range of concrete repair products improving the service life of the structure cost effectively.

Concrete repair products produced by Cormix are formulated to extend the life span of the structure safely and economically. Cormix offers integrated solutions for all types of repair that conform to local & international standards.

The products produced by Cormix represent the most up-to-date technology, are environmentally friendly and are designed for ease of application in building & civil engineering projects.

GROUTING SYSTEMS

An Extensive range of high performance precision grouts with many applications

Precision grouts are flowable construction materials used for load transfer and stabilization. The tough engineering requirements for precision grouts of load transfer, stability, and durability in difficult environments combined with the need for ease of application in demanding conditions have been the driving force in developing grouts.

Grouts supplied by Cormix achieve the highest performance available today. The company is a market leader in grout technology and has developed an extensive range of grouts with various performances & applications. These specialist grouts are formulated to provide specific characteristics such as high flow, long pot life, rapid early strengths, chemical & high temperature resistance. Products may be tailor made to specific project requirements.

CONCRETE & SHOTCRETE ADMIXTURES

Advanced admixture solutions maximising flexibility and minimizing the cost of concrete production

Cormix's advanced concrete admixture technologies leads to the enhancement of the quality of concrete & significant cost benefites. The admixture solutions are designed to maximise flexibility & minimise the cost of concrete production.

Cormix shotcrete accelerators have been developed in reply to the demand for durable, high quality sprayed concrete minimizing health and environmental risks.

The Cormix range of admixtures includes the latest carboxylated fourth generation superplasticisers. The admixture range is supported by concrete accessories such as mould oils, curing compounds, surface restarders & other specialist materials linked to producing sound concrete.

UNDERGROUND CONSTRUCTION

Cormix's underground construction team brings professional technical support with customised solutions. Continuous innovation ensures products development to meet the exacting demands of tunneling & mining needs. Systems include stabilizers, injection for water stoppage, anchoring, grouting, soil conditioners, concrete and shotcrete admixtures and waterproofing.

INDUSTRIAL FLOORING SYSTEMS

Solid flooring systems satisfying the needs of diverse industries and a variety of applications

The flooring systems produced by Cormix satisfies the needs of diverse industries and a variety of applications. Cormix ensures the success of a new floor by developing user friendly materials limiting the problems associated with installation and by training approved applicators in the correct use its products.

The following systems are available from Cormix :

- Epoxy Coatings, Self Levelers and Screeds.
- Acrylic Coatings.
- Polyurethanes-Self Levelers and Screeds.
- Self Leveling Cementitious Over & Underlayments.
- Liquid and Shake on Floor Hardemerns.

R&D

Cormix leads the way by investing heavily in people and product research and development with a focus on introducing high performance, technically differentiated products & services.

Cormix is constantly improving its products & by working closely with its customers providing the necessary solution to today's demands.

The Cormix laboratories are available to its partners to provide analysis, advise and to develop tailor made materials.

QUALITY ASSURANCE

Cormix International Limited maintains the ISO 9001 quality system which verifies that its quality systems meet the requirements of International quality management standards.

Such quality assurance offers various benefits to the customer including consistently high product quality, service and innovative developments responding to actual customer needs.

EXCELLENT TECHNICAL SERVICE AND TRAINING

Cormix provides on site professional consulting services for contractors and applicators, its supervisors will demonstrate or supervise the application of products to support end users. In addition assistance is provided to specifiers in specification writing for standard or specific problems. Training courses are run at Cormix's training centre or customers premises.
