

# **Condur** ® **CF Impregnation**

# A TWO PART SOLVENT FREE EPOXY IMPREGNATION SYSTEM

#### **DESCRIPTION**

A two part Solvent Free, 100% Solids, Epoxy impregnation system.

# **USES & ADVANTAGES**

Condur CF Impregnation is used in conjunction with Condur CF Fabric reinforcement system

# Advantages include:

- · Easy application by roller.
- 100% Solids (No Volatile Organic Content)
- · Excellent adhesion to various substrates.
- · Very good chemical resistance.
- · Easy to mix.
- Moisture insensitive

# **PROPERTIES**

Appearance: Part A: Clear viscous liquid

Part B: Clear liquid

Density Mixed: 1.12 kg/ltr @23+°C

 Tensile Strength :
 @23°C

 7 days 32.1 N/mm²
 ASTM D638

 Bond Strength :
 @23°C

 7 days > 4 N/mm²
 ASTM D4541

(Concrete failure)

Flexural Strength: @23°C 7 days 52.4 N/mm<sup>2</sup> ASTM C580

**Mix Viscosity:** 2300 C.P.S. @23°C

Curing Time: 7 Days

Pot Life: 60-70 minutes. @23°C

ASTM C881

Over Coating Time: 2-4 hrs @23°C

#### SUBSTRATE PREPARATION

Ensure that the concrete surface is clean and sound. Remove all contaminates including coatings, grease, oil, dirt, excessive laitance, salts and unsound material by grinding, hammering, etc. Where necessary degrease with chemical degreaser.

Any structural cracks should be injected with **Condur SC** epoxy resin injection material.

Note:- Unsound deteriorated concrete that occurred as a result of corrosion of rebars, needs to be removed to behind rebar. Corroded rebar to be cleaned with rust remover. Apply Congard Zinc on cleaned rebar as a corrosion protective coating. Apply Condur EA2 as a bonding bridge on the prepared concrete surface. Apply Conpatch 600 Series over Condur EA2 bonding bridge to bring back the profile of concrete.

In the case of porous substrate, finish the surface defects such as pinholes with **Condur FC**.

# **MIXING**

Part A: Part B = 2: 1 by weight

Mix Part A and B together for at least 3 minutes with a slow speed mixer (max.300 rpm). Avoid aeration while mixing. Mix only the amount that can be used within the pot life.

#### **APPLICATION**

- Apply the first layer Condur CF Impregnation to the concrete substrate with a roller or brush at the coverage rate of 0.6 kg/m²
- Apply the precut Condur CF Fabric firmly over the Condur CF Impregnation and remove entrapped air by rolling the surface of Condur CF Fabric 2-3 times in the direction in which it is being placed. This ensures proper impregnation of the Condur CF Impregnation into the Condur CF fabric.
- After 2 -4 hrs @23°C, roller apply a second layer of Condur CF Impregnation at the coverage rate of 0.25 kg/m² to completely seal the surface of Condur CF Fabric.

Note: In the case of additional layers of Condur CF Fabric, the previous applied layer of Condur CF Fabric on Condur CF Impregnation should be cured for at least 24 hrs prior to the second layer application.

- Full cure of the epoxy resin takes 7 days at 23°C at lower temperatures full cure will require longer time.
- Finish with a coating if required such as Elastoclad (UV resistant 100% acrylic elastomeric coating).

**Note:** Condur CF system should only be applied by specialist applicators who have had training in the installation of this system. Cormix International can provide such training & a list of approved applicators.

# **LIMITATIONS**

**Samples:** - Witness samples should be made at site and tested in a laboratory to ensure the material meets the responsible designers requirement.

**Substrate & Ambient Temperature** should be between 8°C and 36°C. The substrate temperature should be at least 3°C above the dew point.

The product should only be used by experienced professionals. In hot or cold conditions precondition the product 24 hours before use.

Protect from rain for 24 hours after application.

Consult a structural engineer for load calculations & design. A qualified structural engineer must be responsible for designing the works. Care must be taken is selecting suitably experienced and trained contractors

Protect from permanent exposure to direct sunlight moisture & or water.

# CONSUMPTION RATE

Approximately 0.60 kg/m<sup>2</sup> for 1<sup>st</sup> layer. Approximately 0.25 kg/m<sup>2</sup> for 2<sup>nd</sup> layer.

### **PACKAGING**

Condur CF Impregnation: 10.5 kg set

#### STORAGE & SHELF LIFE

Condur CF Impregnation has a shelf life of 12 months from date of production stored properly in original unopened containers in dry conditions at temperatures between +5°C to 35°C. Protect from sunlight.

<sup>\*\*</sup>Properties are typical under laboratory conditions and do not constitute a specification.

# **HEALTH & SAFETY**

Please consult the latest Safety Data Sheet available on request.

# **TECHNICAL SERVICE**

The Cormix International Technical Service Department is available to assist you in the correct use of our products and its resources are at your disposal entirely without obligation.

# **QUALITY ASSURANCE**

ISO 9001: 2008 verified by TUV Nord.

#### **DISCLAIMER**

Performance data is achieved testing in accordance with International Standards. Testing by others may result in different results from those published as a result of external factors such as poor sampling, incorrect mixing, varying temperatures, curing, crushing procedures etc. Cormix does not take responsibility nor need to defend others testing that does not achieve the published data. The user must test the products suitability for the intended application and purpose. Cormix reserves the right to change the properties of the product. Site conditions and differences in materials are such that no warranty or fitness for a particular purpose, nor liability can be inferred from the published data sheet.
